Project Overview

The REQ Management System is a high-performance Big Data processing engine designed to ingest, index, and query massive corporate registry datasets. Specifically tailored for the *Registre des entreprises du Québec* (REQ), the system successfully manages over 1 million registered businesses, seamlessly linking parent enterprises, operating names, and physical establishments into a highly searchable and exportable offline database.

Business Problem

Market research firms, legal compliance teams, and B2B sales agencies rely heavily on government corporate registries for accurate data. However, downloading open-source registry data yields massive, unstructured files containing millions of rows spread across fragmented tables (Enterprises, Names, Establishments). Standard tools like Excel instantly crash under this weight, making it impossible to quickly query a specific NEQ (Quebec Enterprise Number) or filter businesses by regional postcodes for lead generation.

Our Solution

Admyon Systems engineered a custom Big Data relational architecture capable of effortlessly handling over 1,000,000 corporate records without performance lag. The platform normalizes the raw REQ data dumps, organizing complex legal structures—such as mergers (Fusions/Scissions) and multiple operating names (Noms)—under their master NEQ. With a powerful search indexing engine and a one-click Excel export utility, the system transforms chaotic government data into an actionable, high-speed business intelligence tool.

Key Features

- Massive Dataset Architecture (Successfully indexing >1 Million Business Records)
- Quebec Regional Localization (Native support for NEQ, REQ, and French statutory terminology)
- Advanced Relational Data Mapping (Linking Enterprises to Establishments and Trade Names)
- High-Speed Query Engine (Search by Business Name, NEQ, or Postal Code)
- Bulk Excel Export Utility for external CRM integrations or B2B marketing campaigns
- Corporate Lifecycle Tracking (Incorporation Dates, Legal Forms, and Statutory Declarations)

Technologies Used

Technology	Used
Microsoft Access (Frontend UI)	✓
SQL / Advanced Database Indexing	✓
VBA (Visual Basic for Applications)	✓

System Modules

- Main REQ Search Dashboard
- Enterprise Legal Structures (ManageEnterprises)
- Business & Trade Names (ManageNom)
- Physical Establishments & Addresses (ManageEtablissements)
- Mergers, Splits, and Continuations (Fusions/Scissions)

The foundational backend table storing critical statutory information for over 1 million entities, recording legal jurisdiction forms, statutory declaration years (AN_DECL), and official dates of incorporation (DAT_IMMAT).

Business Benefits

- ✓ Unlocked massive B2B lead generation capabilities by providing instant, filterable access to over 1 million Quebec businesses
- ✓ Eliminated software crashes by replacing standard spreadsheets with a properly indexed, relational database engine
- ✓ Streamlined corporate compliance auditing by centralizing complex legal histories, mergers, and statutory filing dates
- ✓ Accelerated market research timelines through the rapid Excel export utility
- ✓ Provided absolute offline data security and stability for highly sensitive corporate intelligence

Project Highlights

- 1 Million+ Record Indexing
- REQ/Quebec Localization
- Big Data Processing
- Advanced Search Algorithms
- B2B Lead Generation Utility

Future Enhancements

Future versions of this system may include:

- API integration with the *Données Québec* open data portal for automated, scheduled delta updates (fetching only new or modified businesses).
- Integrated Google Maps API to visualize business distributions based on postal codes.
- Automated English-to-French translation mapping for economic activity descriptions (NAICS codes).
- A custom tagging system allowing sales teams to mark specific NEQs as "Contacted" or "Qualified Lead".

Project Summary

The REQ Management System emphatically demonstrates Admyon Systems' prowess in Big Data engineering. By successfully taming over a million rows of complex, fragmented government registry data into a lightning-fast, user-friendly interface, this platform serves as an indispensable intelligence tool for modern legal, financial, and B2B research operations.
